

AIMaP 公開シンポジウム

「数学イノベーションは社会を変革できるのか～AIMaP 成果と今後の戦略的展開～」

<2022年3月10日(木)>

基調講演タイトル：

Mathematics strongly serving our societies all over the world

講師：

Maria J. Esteban

(国際産業数理・応用数理評議会 (ICIAM) 前会長、仏国立科学研究センター (CNRS) 上席研究員、パリ DAUPHINE 大学 CEREMADE 研究センター)

基調講演概要：

In this presentation I will present a large number of initiatives that have been launched in many countries in order to highlight the importance of Mathematics for our societies and our economies. Apart from describing some of the accomplishments of those, I will insist on the reasons why Mathematics is so useful, and actually indispensable, for the swift development of future technologies. Mathematics was always very present in the general scientific developments and accompanied some important industrial progresses during the 20th century, but its role in the 21st century has become ubiquitous and extremely powerful.
